

WHAT IS CLAIMED IS:

1. A connector, comprising terminals, a terminal holding member that is made of an insulating material and holds said terminals, and a cable that is electrically connected to said terminals and extends out from said terminal holding member,

and further having a pull tab that has a tip end part thereof bonded onto said terminal holding member and extends outwards,

wherein said connector is removed from a counterpart connector into which said connector has been fitted by pulling said pull tab.

2. The connector according to claim 1, wherein said pull tab is formed from a conductive material.

3. The connector according to claim 1, wherein said connector is a straight type connector, and said tip end part of said pull tab is bonded using an adhesive onto an outside face of said terminal holding member, and a rear end part of said pull tab extends rearward along said outside face.

4. The connector according to claim 1, wherein said connector is a right-angled type connector, and said tip end part of said pull tab is bonded using an adhesive onto an outside face on a fitting port side of said terminal holding member, and a rear end part of said pull tab extends rearward along said outside face in a direction perpendicular to the

direction of extension of said cable.

5. A connector, comprising terminals, a terminal holding member that is made of an insulating material and holds said terminals, a cable that is electrically connected to said terminals and extends out from said terminal holding member, and a protective cover that is made of a conductive material and covers said terminal holding member,

and further having a pull tab that has a tip end part thereof bonded onto said protective cover and extends outwards,

wherein said connector is removed from a counterpart connector into which said connector has been fitted by pulling said pull tab.

6. The connector according to claim 5, wherein said pull tab is formed from an insulating material such as nylon, PET or a polyester.

7. The connector according to claim 5, wherein said connector is a straight type connector, and said tip end part of said pull tab is bonded using an adhesive onto an outside face of said protective cover, and a rear end part of said pull tab extends rearward along said outside face.

8. The connector according to claim 5, wherein said connector is a right-angled type connector, and said tip end part of said pull tab is bonded using an adhesive onto an outside face on a fitting port side of said protective cover, and a rear end part of said pull tab extends rearward along said outside face in a direction perpendicular to the direction of

extension of said cable.
